🕵️ Detective Diaries: My First Mission as an AI Inspector

Hey friends! 👋 Guess what — I just got promoted to **Responsible AI Inspector**. Sounds fancy, right? Basically, my job is to check if AI is playing fair… or being a little sneaky. Today, I worked on two cases. Let's dive in!

🎥 Case 1: The Hiring Bot

I walked into the office. The AI hiring bot was flipping through CVs like a speed reader. 📄🤖
It kept picking people who never took a break from work.

🚨 **Red flag!** What about moms who took maternity leave? Or people who paused for family, health, or studies? This bot was treating career gaps like crimes. That's unfair bias!

🔧 **My fix:** Teach the AI that breaks are normal (because humans aren't robots). And tell applicants why they were rejected. Transparency builds trust.

🎥 Case 2: The Exam Proctoring AI

Next stop: an online classroom. The proctoring AI was watching students through their cameras 👀. If someone looked away or fidgeted, it shouted: "Cheating!"

🚨 **Red flag!** Some students are neurodivergent, anxious, or just can't sit still like statues. The AI doesn't get that — so it ends up punishing innocent people.

🔧 **My fix:** Let the AI only *suggest* suspicious cases. A human teacher should make the final call. Plus, design the system with accessibility in mind so no one is left out.

✍️ Case Closed

Being an AI Inspector isn't about banning AI. It's about making sure it's **fair, transparent, and human-friendly**. Because at the end of the day, tech should work for people — not against them. 💡

👀 Stay tuned… my next mission might just be about AI in social media.
